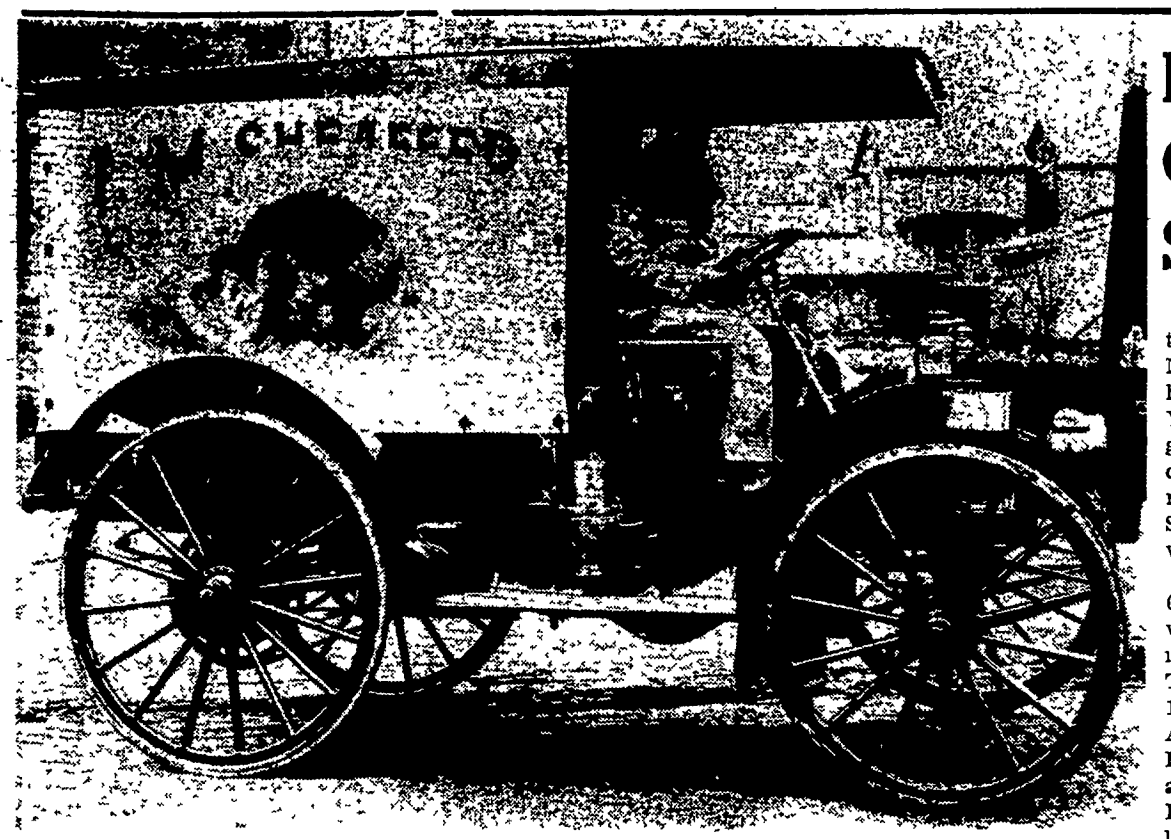
Lancaster Farming

VOL. 10 NO. 51 | Lancaster Farming, Saturday, November 20, 1965 | $2 Per Year



L. M. SHEAFFER, who founded the egg marketing company which today bears his name, shown with one of the early trucks he used for gathering eggs and poultry from Lancaster County farms.

L. M. Sheaffer, Lancaster County Egg Firm, Marks Sixty-Fifth Anniversary

Sixty-five years ago a six- squab company to a truck teen-year old lad named Levi operated egg collection and Martin Sheaffer returned marketing plant in L. M. home to Ephrata from New Sheaffer's lifetime. Following York City with orders from his death in 1932, his son gourmet restaurants for Wilbur H took over management of the company, establishing many collection branches and expanding wholesale distribution to include not only hotels, restaurants and institutions, but also chain food markets and dairies

The company celebrated its 65th anniversary this past week with a banquet honoring its long-time employees The affair was attended by 120 guests and employees Among those cited were Miss Edna Berkheimer, office manager with 40 years service; Ralph Kreider, Clarence Metzler, and Harry Liebold, all with over 35 years service.

The business grew from a one horse and wagon dressed

Following his untimely death in an auto accident in 1952, his widow and son, Ray W. Sheaffer, formed a partnership to operate the business

Since that time, the firm has greatly modernized its methods of production and

Stauffer Named County Holstein Assn. President

by Everett Newswanger
staff reporter

A prominent Ephrata area dairyman was named president of the largest Lancaster County dairy breed organization last week at the election of officers held immediately following the annual meeting

Clarence Stauffer, formerly vice-president of the 522-member Lancaster County Holstein Association, was picked to succeed retiring president Roy Book, Ronks

Young Farmers Hear Specialists Discuss Farm Credit Problems

Speaking before a group of about 35 Lancaster County Young Farmers Tuesday night at the Garden Spot High School, four finance specialists discussed the role of credit in farming; the types of loans to be considered, and what the banker looks for in a prospective credit customer.

Leading off the panel was Raymond Baxter of the Blue Ball National Bank. He stated that in his twenty years of banking he has seen the area between the Susquehanna and Schuylkill Rivers become highly industrialized. This, he said, has worked in favor of those making loans. He described the function of the home-town banker, and suggested that he was often in a better position to judge the quality of a local loan ap-

Penn Manor Young Farmers Take Part In State YFA Convention

Several Penn Manor Young Farmers participated in the YFA state convention at Penn State University this week by conducting a panel discussion on "Forage Testing."

Representing the Penn Manor Chapter were Jay Garber and Sterling Elmer, both of Lancaster R6; and Chris Nissley from A. H. Hoffman Seed Co. of Landisville. Because of his associa-

USDA To Raise Fees On Meat Grading Service

The U S. Department of Agriculture has announced that fees for the voluntary federal meat grading service will be increased from $7 40 to $7 80 per hour, effective Nov. 21.

The Consumer & Marketing Service, which administers the grading service, said the fee increase is necessary to meet increased costs of operation.

The Agricultural Marketing Act of 1946, under which the grading service is operated, provides for collection of fees approximately equal to the cost of rendering the service. The increased fee will bring revenues more nearly in bal-

Noah Wenger Named To Head Lancaster County Farmers Assn.

Noah Wenger, Stevens R1, was elected president of the Lancaster County Farmers Association on Tuesday night at a reorganization meeting held at the James M. Garber farm, Mount Joy R2. Wenger replaces retiring association president J. Robert Hess of Strasburg R1.

Other officers reelected were Clyde Wivell, Columbia R1, vice-president; Donald Ney, Marietta R1, secretary-treasurer.

Clarence Stauffer of Ephrata R1 was named membership chairman for the coming year.

County 4-H Livestock Judges Add Titles At H'bg. And Timonium

Paced by Fred Hess, Leola R1, at the Pa. Livestock Exposition, and by Ken Hess, Strasburg R1, at The Eastern National Show, the Lancaster County Livestock Judging Team added two more major titles in preparation for the national 4-H competition at Chicago later this month.

At the Livestock Exposition, the county 4-H judging team — state champions for 1965 — represented Pennsylvania in the junior event, and defeated teams from Virginia, Georgia, Maryland, and Indiana.

Led by Fred Hess, who was top individual judge in the junior show with 753 points out of a possible 800, the county team repeated last year's winning performance.

Last Saturday at Timonium, Maryland, the team captured a first in beef cattle, fourth in sheep, and second in swine judging to win the over-all title Ken Hess took high individual honors with 577 out of a possible 750 points. He was followed by David Heisey, Newmanstown R1, with 566 points, and by

Weekly Poultry Report

Eastern Pennsylvania And New Jersey
WEEKLY SUMMARY

LIVE HENS

Prices on light type hens mostly ½c higher. Offerings light overall, but increased in instances in Pa. where flock owners are anxious to make space for range pullets. Also, occasional offerings noted where producers are planning vacations during deer hunting season. Offerings adequate for light buying interest on heavy type hens. Prices paid at farms Light type hens 7½-9 mostly 8-8½c; heavy type hens 15½-16c. Few open market sales of 7½-8# roasters were priced @25-28c on a straight run basis Movement heavy on contractual grown roasters with supplies barely adequate for requirements. Trading lighter on capons as most flocks generally committed for movement prior to the Thanksgiving holiday.

TURKEYS

Demand fair on all classes. Offerings barely adequate on hens, adequate on toms and limited on small type. Occasional sale of small type hens weighing at 11 lbs. sold at 30c and toms at 25c. Prices on hens at 27-28c reflect sales on small volume flocks. Prices paid at farms' Heavy Type Hens 26-28 mostly 26c Heavy Type Toms too few to report.

Fogelsville
November 16, 1965

(Prices for dock weights, cents per lb. except where noted)

Hens, light type, range 7-9½, mostly 7½-8½; Hens, heavy type 8-17, 13-15; Pullets 19½-30, 25-28; Roasters 10-35, 28-35, Capons 36-47, 40-46; Ducks 15-38, 20-28½; Drakes 15-42½, 36-42; Geese 24½-34½, 30-34½; Turkeys, toms 20½-29, 22-26; Turkeys, hens 27½-40, 30-36; Rabbits 28½-40, 34-40; Guineas 36-50, 40-47½; Pigeons (per pair) 25-1.20, 60-80.

Total coops sold: 1608.

Eastern Shore Exchange
WEEKLY SUMMARY

Broilers and fryers live prices on the Eastern Shore Exchange this week averaged 14.95 cents per lb., down 1¼ cents from last week's average

Prices ranged from a high of 16 2 cents per lb on Monday to a low of 14 0 cents on Wednesday.

Sales for the week were 710,000 head, about 150,000 more than for the three-day market of last week, but down considerably from recent weekly averages.

Delmarva
November 19, 1965

Broilers and fryers live prices advanced ¼-cent with fairly good demand for light auction offerings Live supplies adequate for reduced needs

Estimated slaughter for Friday and Saturday, 677,000 head, compared to 755,000 last weekend.

Prices paid at farms and reported purchases for the 24-hour period preceding market close on Friday ranged, 14 5-15 7 cents per lb. on sales of 733,800 head.

Helping the World Grow Better

ORTHO

Advantages of Fall Plowing Down of ORTHO FERTILIZERS

1. Gives opportunity for part of spring work to be done when time is less critical.
2. Allows winter freezing and thawing to mellow heavy soils and provide better seed bed.
3. Causes fields to dry and warm up earlier — permits earlier planting.
4. Avoids soil compaction from working fields when too wet.
5. Escapes planting delays caused by wet springs.
6. Reduces run off and increases stored moisture.
7. Increases yields of many crops.

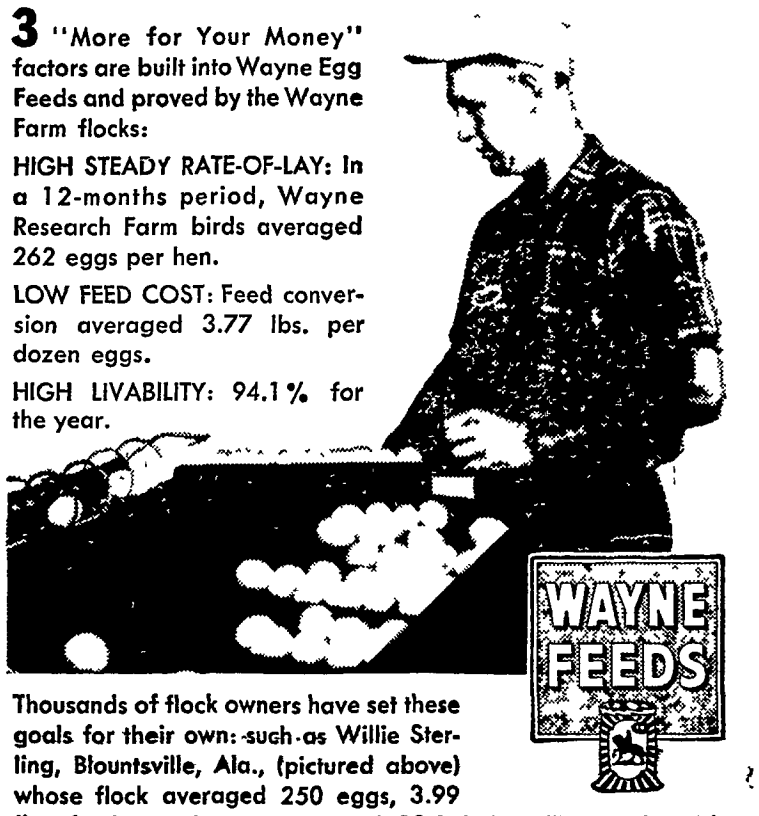
Here's How Wayne Egg Feeds Give More for Your Money

3 "More for Your Money" factors are built into Wayne Egg Feeds and proved by the Wayne Farm flocks:

HIGH STEADY RATE-OF-LAY: In a 12-months period, Wayne Research Farm birds averaged 262 eggs per hen.

LOW FEED COST: Feed conversion averaged 3.77 lbs. per dozen eggs.

HIGH LIVABILITY: 94.1% for the year.



Thousands of flock owners have set these goals for their own: such as Willie Sterling, Blountsville, Ala., (pictured above) whose flock averaged 250 eggs, 3.99 lbs. feed per dozen eggs, and 90.1% livability; or Harold Hanna, Woden, Iowa, whose feed cost ran as low as 12.8¢ per dozen.

You can get "More for Your Money" if you'll try Wayne; come in and let us recommend the proper feeding program for YOUR needs.

From Where We Stand . . .

The Thanksgiving Feast Is Truly American!

Thanksgiving Day is a purely American feast, begun traditionally by the Pilgrims, and continued through the centuries as a national day of religious and gastronomic significance.

Even today when all the foods of the world are available to enrich our daily diet, the Thanksgiving menu of the average household is still predominantly American in origin and production. A sumptuous feast can be spread with only the kinds of food that the pre-Columbian Indians knew and taught the white men how to raise and use. An All-American Thanksgiving menu is tempting to a gourmet's taste and satisfying to a hungry, growing boy.

Turkey, cranberries, both white and sweet potatoes, numerous sorts of beans, squash, pumpkin, tapioca, corn, including sweet corn and popcorn, peppers, avocado, cocoa and chocolate, oysters, pineapple, chestnuts, peanuts, brazil nuts, cashew nuts, and while not strictly a food, the tobacco of the after-dinner cigaret, cigar or pipe. All of these are of strictly American origin.

Even without excluding non-American dishes, the usual Thanksgiving dinner, with roast turkey, cranberry sauce, string beans, corn bread, pumpkin pie on the menu, is American enough. Those who wish can easily build in their kitchens a strictly made-in-America Thanksgiving bill of fare.

The turkey that is the center of the usual Thanksgiving feast has a dual claim to the 100 per cent citizenship. It is as native to the American continent as the Indians. Yet the turkey also has a record of early immigration from Europe.

Cranberry sauce is as American as the roast turkey that it accompanies to *the relish of the feast. Cranberries are* found only on the American continent. The cranberry bogs of New Jersey are famous the world over.

"Fixin's" are indispensable to the turkey, and sweet potatoes are indispensable to the "fixin's" Sweet potatoes, as well as the white potatoes, misnamed Irish, are American in origin.

The sweet potatoes, "taters" south of the Mason and Dixon line, are probably of tropical origin. At any rate, they thrive best now in the warmer parts of the country.

The white potato is not Irish but Peruvian in origin. It got its misnomer because it was so widely grown there and Irish immigrants in the early 1700's brought large quantities of them to the United States

For the salad course, there may be avocadoes, also called alligator pears, for these are native to this hemisphere

The bread should be corn bread, of course

Corn is the greatest of the agricultural gifts of America to the world When the first settlers from England found this grain being cultivated by the Indians they called it Indian corn to distinguish it from the use of the word corn to mean in British usage all kinds of grain, wheat, barley, rye and all the rest.

Corn probably originated in the South American highlands but by the time the white men came its cultivation had spread as far north on this continent as the climate permitted.

In the fields of Indian corn found by the early colonists, there were orange - yellow pumpkins growing much as they are grown today.

Pumpkin pie is as Thanksgiving as turkey, yet just 50 years after Columbus the American pumpkin had been so adopted in Europe that it was being called the Turkish cucumber.

Beans of many varieties deserve a place in the American Thanksgiving table, for they were **extensively** cultivated by all the native populations of the New World.

Nuts give Thanksgiving a double dessert.

America is a land of rich and varied food supplies, capable of sharing its bounty with other areas of the world and willing to aid other countries to raise larger crops of food, often of western hemisphere origin. We are thankful for this at this Thanksgiving as it may help bring peace to the future of a less hungry world.

Farm-City Interdependence

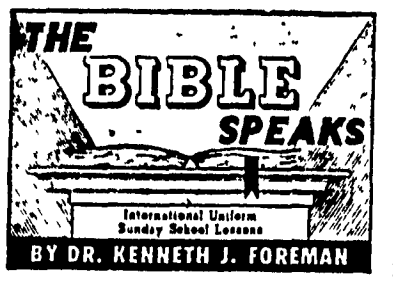
Once each year farmers and city folk officially take time out for a good look at each other. Theoretically, this aids understanding between these two segments of society, so Farm-City Week is proclaimed throughout the land. This year it will be celebrated November 19-25.

In reality, the position of the American farmer has shifted considerably over the years — his shrinking number, his greater production, his dwindling political importance are all well-known facts. But what image of the farmer must the city and suburban dweller have? From what he sees in his daily paper and gathers through other news media, he may even believe the farmer is a federal employee!

Governor Scranton has said that as farmers prosper the Commonwealth's whole economy benefits. Unfortunately, this does not always work both ways.

Farmers make a real contribution to the standard of living of the average consumer and to the total economy. Perhaps this point can be made most effectively during Farm-City Week while the consumer's attention is directed farmward, and while his mind is on plans for the Thanksgiving feast.

According to Russell Larson, Dean of the College of Agriculture at Penn State University, agriculture and its related businesses in Pennsylvania pump $15 billion a year into the economy Total farm production expenses in 1963 accounted for $700 million of this. Agriculture continues to be one of the leading industries in Pennsylvania.



A Soldier's Faith

Lesson for November 21, 1965

Background Scripture: II Kings 5 1-27. Devotional Reading: Psalm 103.1-12.

ARMY MEN and religion are not ordinarily thought of together. But some soldiers have been famed for their religious faith. It would interest the reader to run through the Bible and note the many soldiers mentioned there who were as religious as they were brave. In modern times it is the same. One of the first things General Eisenhower did on becoming president was to

Dr. Foreman

be baptized and join the church. An American seminary recently had in its student body a retired British Major-general. And so it goes. One of the most dedicated Christians this writer ever knew was a regular army captain.

Faith and humility

It is humbling experience for a man with the habit of command and used to giving orders to enter the Kingdom of God like a child, as Jesus expressed it. But the bravest can also be the humblest. The story of Commander Naaman in II Kings 5 is a very interesting case in point. This man was a servant of God without perhaps knowing it. At any rate the writer of II Kings gives God the credit for Naaman's victories over Israel. For that was what he was, conqueror of Israel. In his time he was commander of all the Syrian army, and by his victorious campaigns had reduced Israel to an unimportant and impoverished province of the Syrian Empire. An Israelite girl at the time of this story was serving as lady's maid to the Commander's wife. Now you would not expect a great commander to pay much attention to the ideas of a little slave girl.

Faith and healing

The Commander may have been in desperation, for he was suffering from a disease for which at that time there was no known cure: the dreaded affliction of leprosy. To be a leper was to live under the visible shadow of death. The little maid had said there was a prophet in Israel who by God's help could cure even lepers; so off Naaman rode, with bags full of silver and other gifts fit for a king. Now the story tells itself how the Commander wanted the cure to be done in noble style, like a magic spell, and was angry when he was given the simple command, "Go wash in the Jordan seven times," how he was persuaded to try it, and how he was healed. But this raises many questions today. Does God today ever cure persons without treatment? Are miracles of healing things of the past? God used Naaman to punish Israel though Naaman did not realize it, so now God works miracles of healing through the genius and skills of professional physicians. God is in the hospital just as surely as he is in the Jordan.

Faith and the halfway house

Naaman was sure that God had cured him. But he was not about to come out and live with the Israelites. Instead he was going to keep on going to the "House of Rimmon," the temple where the Syrian God Rimmon was worshipped. The startling thing here is that the prophet Elisha did not object to this but gave his blessing. "Go in peace," he said, in farewell. You would have expected that Elisha would roundly rebuke the Commander, perhaps saying, "Come all-out for the true God, the God of the prophets, Elisha's God, and don't stay in the half-way house of a pagan temple." But Elisha did not take this intolerant attitude. Naaman was coming as far as his situation allowed. Full faith might have drawn him clear away from his heathen homeland, would have made an Israelite of him, would have made him in fact a traitor to his own king. Elisha recognized that this would have been asking too much. Better a faith that stops in the half-way house of Rimmon than no faith at all. Better a faith unconfessed than no faith. God could see Naaman's heart.

Go To Church Sunday

Now Is The Time . . .

By Max-Smith, Lancaster County Agent

To Meet Phosphorus Needs

SMITH

One of the most lacking soil elements throughout the county and the state is phosphorus This is true in many parts of the country and in a recent New York study it was concluded that farms with a high phosphorus level had higher labor incomes The amount of money left for labor rose along with phosphorus levels in the soil This reflects greater production per acre on land that is treated to meet the fertilizer needs. Complete soil tests can be secured now before the ground freezes and will give time for planning the 1966 crop program

To Care For Batteries

Cold weather is hard on batteries in service or in storage At this time of the season it would be timely to clean the top of the battery by removing the white deposit with baking soda and water, then treat the terminals with grease or petroleum jelly. Be sure the cells are kept filled with water at all times and carry the maximum amount of charge

To Cull Cows

Dairymen are urged to make an effort to have every stall occupied with a high producing cow In past years it might be said that some stalls were used by cows merely to help keep the barn warm so that the water pipes didn't freeze With high overhead costs and high production costs, those days are over and every cow must pay her way Only high producing cows will pay for this large investment in the dairy business Dairy herd testing is the best way to learn of the actual production and return on each cow.

To Protect Evergreens

One of the main reasons for winter loss among evergreens is the lack of sufficient soil moisture With a short supply of the moisture in the ground after it freezes, it is impossible for the plant roots to draw the needed moisture to replace the amount of water lost through transpiration This means that the plant dries out and dies.

● 4-H Judges

(Continued from Page 1)

Fred Hess with 559 The contestants defeated teams from Virginia Georgia Maryland Indiana, and Kentucky

The team, coached by M M Smith, Lancaster County Agricultural Agent will compete in the 4-H judging events at the International Live Stock Exposition at Chicago on November 26 In last years national competition the county team placed second nationally in over-all judging

Weather Forecast

Temperatures for the five-day period, Saturday through Wednesday, are expected to average below normal. It will be colder over the weekend and milder about mid-week.

Precipitation for the period may amount to 1/4-1/2 inch occurring as rain Sunday night and again Wednesday.

● Grading Fees

(Continued from Page 1)

ance with this cost, C&MS officials said

Minimum fee and hours charged on weekly contracts will be $312 for 40 hours

Regulations governing the meat grading service are being amended to permit the fee increase.

Crop & Livestock Round-Up

FALL PLANTINGS IN PA. HAVE GOOD START

Another month with adequate rainfall and near normal temperatures has given fall grains the needed push to put them in fine condition for going into the winter according to the Pennsylvania Crop Reporting Service

CORN PRODUCTION FAVORABLE

Although there are exceptions the outturn of corn in Pennsylvania proved quite good considering earlier prospects In most of the important southeastern part of the State production was good with some farmers getting record yields for their farms In the southwest yields were poorer while to the north some had high yields and some low Stalks were generally short in most areas but ear development good

HAY & PASTURE IN FINE SHAPE

Newly seeded hay fields and older stands were in fine shape with many new stands having about 6 inches of growth Some farmers made a little late hay but curing was difficult because of rains The favorable growing weather put pastures in good condition for the date Livestock obtained much of their current roughage needs from pastures allowing farmers to conserve winter feed supplies.

POTATO YIELDS HIGHER

Potato digging, normally completed during October was lagging in some areas due to wet weather Yields mostly exceeded earlier expectations. Quality of the crop is good.

PRODUCTION OF TYPE 41 TOBACCO UP 3 PERCENT

Estimated production of Pennsylvania Seedleaf tobacco remains unchanged at 47.2 million pounds The current production forecast is 3 percent larger than the 1964 crop but 13 percent less than the 1959-63 average The crop is expected to yield an average of 1750 pounds per acre, 50 pounds greater than last year's yield but 50 pounds below the 5-year average. However by disregarding the 1962 and 1963 crops when high yielding varieties were grown, the crop is the highest yielding on record.

The month of October offered very good weather for curing of tobacco The majority of the days were warm and moisture was sufficient for best cure Most of the crop has cured down very well leaving little chance for any shed freezing this year.

New Inter-State Directors Named

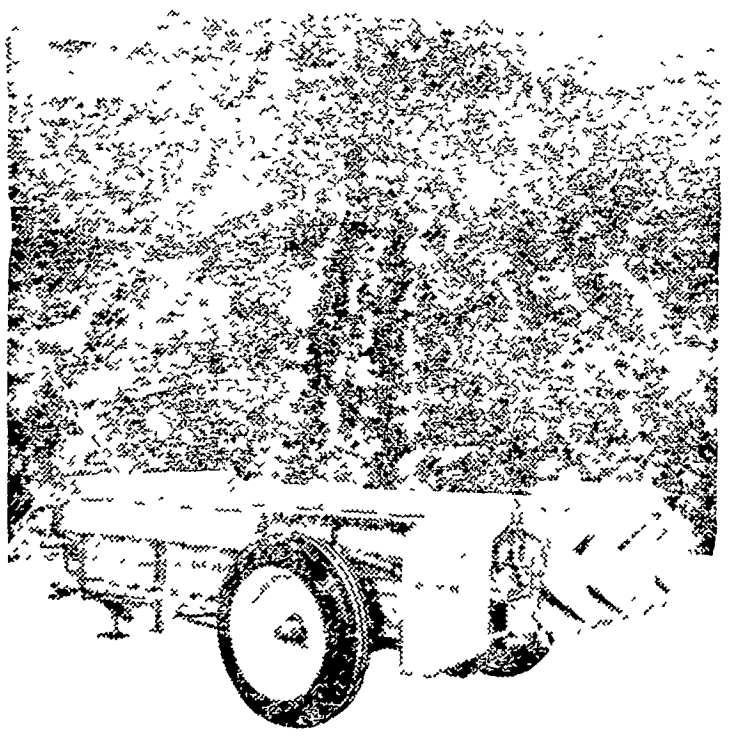
PHILADELPHIA — The Inter-state Milk Producers Cooperative elected three new Pennsylvania directors and reelected eight other directors for three terms The action came at the start of the 3,500-member organization's annual three-day meeting.

Elected to represent new districts were Melvin M Brendle of East Earl R1, for one year Roy A Weaner Jr, Gettysburg R6, for two years, and Robert B McSparran, Peach Bottom R2, for three years

Brendle represents District 6 which includes Christiana, Paradise Witmer and New Holland-Leola locals

M Sparran represents southern Lancaster County and Quarryville locals in District 3

DOLLAR EFFICIENT SINGLE BEATER



Expect a pocket-saving price. The latest in simple design. See the Allis-Chalmers 140-S spreader for features that mean dollar efficiency. Won't freeze up, but sure chews up that packed frozen stuff and spreads it faster, easier.

You get five feed rate selections. Self-cleaning paddles. Low, wide box speaks for itself. Converts to 140 bushel rear-unloading trailer, too. An all-the-way winner.

Also see the NEW giant 180 bushel size. Or the compact 95. Two Allis-Chalmers farm loaders, too. C'mon in!

Stauffer

(Continued from Page 1)

R1, Friday evening following the association's 15th annual banquet and business meeting held at the Dutch Town and Country Inn, Vintage

Elected to fill the vacancy created by Stauffer's promotion was Robert Groff, Quarryville R3 To complete the Executive Committee, Daniel Martin of Manheim R1 was returned to his third term as treasurer and Melvin Peifer, Hans Herr Drive, Lancaster will replace Donald Eby, Goidonville R1, as secretary Eby is retiring from the board along with Book and Robert Kauffman, Elizabethtown R1

Newly elected to three year terms as directors on the nine-member board were vice president Groff; Mervin Landis, Bird-in-Hand R1 and Ira Welk, Strasburg R1.

ANNUAL MEETING

Speaking to the 200 members and guests at the dinner meeting, Harry T Kauffman, public relations director of the Philadelphia Dairy Council said that in milk sales promotion "A good sound nutrition program is still the best story to tell the public The slogan, 'You never outgrow your need for milk,' is still as good as ever.

"We can be proud we are producing the best food — milk," he said. "Our American citizens like milk. We need to maintain this fact in people's minds."

Kauffman enumerated some of the ways Dairy Council uses to promote milk.

The "Healthies and Stealthies" puppets perform the milk health story for grade school children.

For the teenager there are the books, "The Boy and His Physique," or "A Girl and Her Figure"

For those beyond high school there are pamphlets dealing with the milk economy story, guides for mothers, recipes and weight reduction

A display trailer that is taken from school to school lets the pupils see "The Miracle of Milk" from glass to table.

The promotion of the dairy princess contest is also supported by the council

Victor Plastow, Associate Lancaster County Agent, said, "Now is the best time to have your forage analyzed so you can follow the DHIA feeding program. Also if you get your soil tested now you can take advantage of the good fall and winter fertilizer prices," he said.

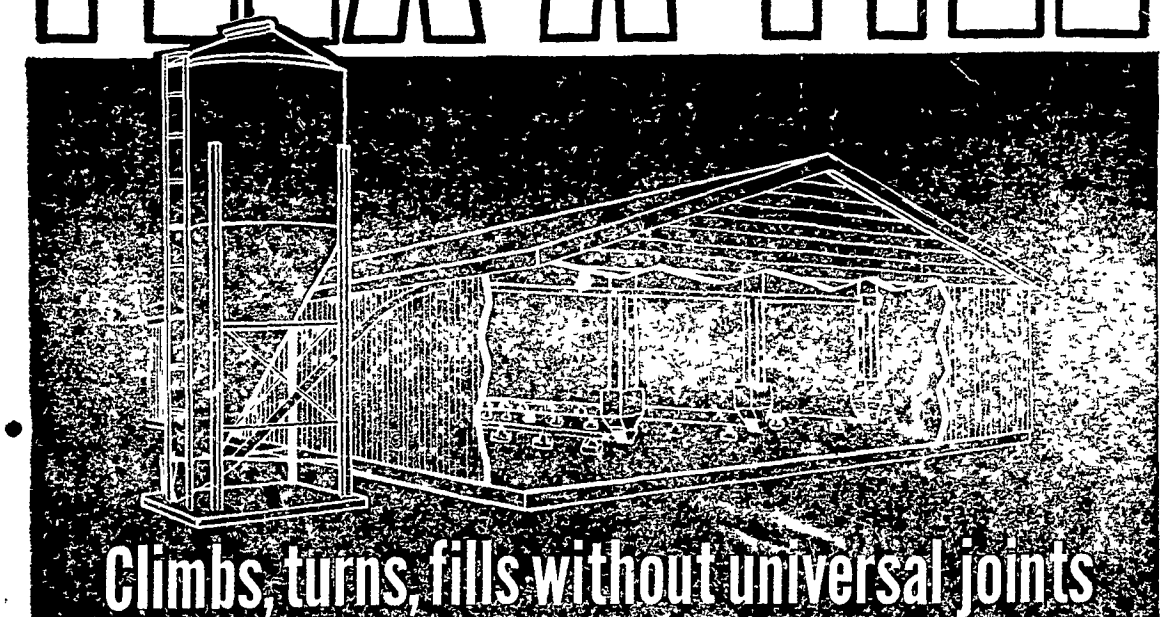
HOLSTEIN MEN. The members of the board of directors for the Lancaster County Holstein Association are, left to right (seated), Daniel Martin, Manheim R1, treasurer; Robert Groff, Quarryville R3, vice-president; Clarence Stauffer, Ephrata R1, president; and Melvin Peifer, Hans Herr Drive, Lancaster, secretary. (Standing) Elvin Hess Jr, Strasburg R1, state director; Daniel Stoltzfus, Mt. Joy R1, Mervin Landis, Bird-in-Hand R1; Clair Hershey, Willow Street R1 and Ira Welk, Strasburg R1. Missing from the picture is Titus Hurst, Lititz R1.

L. F. Photo

William Nichol, state secretary and fieldman for the Pennsylvania Holstein Association stated, "There is no place for the Angus bull in a registered Holstein herd We have a great market for registered cattle Only 20 percent of all Pennsylvania Holsteins are registered," he said

Other features of the program included Elam Bollinger, chairman of the junior project committee, presenting John Kurtz, winner of the project calf. Miss Linda Welk, Lancaster County Dairy Princess was present, and Elvin Hess Jr presented the state director's report.

FLEX-A-FILL



Climbs, turns, fills without universal joints

This new flexible auger system operates without gears and from only one power source. Feed moves up, down or around 90 degree corners to locations over 100 feet away! Just put feed in bulk bin . . . system operates automatically only when needed . . . and there are no joints to clog up.

Auger system has very low horsepower requirement, yet operating at a standard speed of 312 rpm, it will deliver about 1800 pounds of pellet feed . . . or 1500 pounds of mash feed per hour!

Bin fills easily . . . empties completely. Fill it and forget it because its weather-tight construction assures content safety until the bin is empty. "All-Out" bottom empties completely, prevents bridging . . . no internal braces to jam contents and stop feed flow. Caulked seams, neoprene washers, heavy gauge galvanized steel give long rust-free life. Available in side and center-draw models.

EGGS ARE GATHERED continuously at Cloisterdale Farms. Performing this daily task above is Shirley Noll. Eggs are collected in filler flats, cooled overnight, then cased and trucked to the L. M. Sheaffer plant in Ephrata. They are on their way to the stores within 24 hours after being produced. L. F. Photo

EDWARD BOWSER, manager of the 90,000-bird Cloisterdale Farms caged layer plant at Lititz R4, works on record summaries in his farm office. Bowser attributes a good share of the farm's success to careful attention to records, both on the farm and in the office of the L. M. Sheaffer Co. L. F. Photo

● L. M. Sheaffer

(Continued from Page 1)

marketing, and has expanded its plant facilities at the central Ephrata location. In the mid 1950's the company became the first egg packaging plant in the East to install automatic sizing equipment, which ultimately led to the complete automated assembly line for washing, candling, sizing, and packaging The two automatic units have a capacity of 43,000 eggs per hour, and the daily plant capacity now stands at 1500 cases per day.

At present, many of the eggs handled by Cloisterdale are produced in this area, and Sheaffer hopes eventually to get all his supply local-ly. Eggs packaged by the company are marketed in New York and Philadelphia, most of these going to chain stores are packaged under private labels and delivered right to the store door.

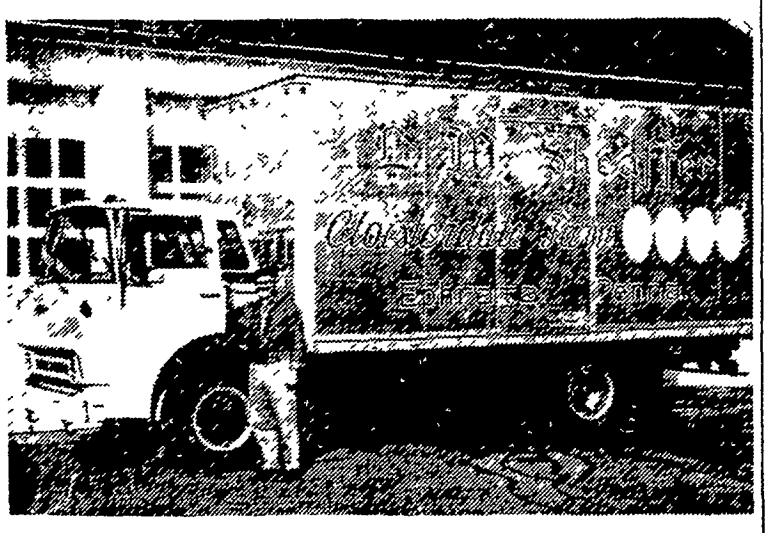
It has often been said that the East cannot compete with outside areas in egg production. To get more information on the costs and problems involved in producing eggs, and to establish a nearby supply of quality eggs for his trade, Ray Sheaffer decided to get into the production phase of the business. Two years ago, ground was broken on a 34-acre farm located about three miles from the plant. The first flock of 15,000 birds was housed in April, 1964.

Today, the complex of six, controlled environment houses, each containing 15,000 caged layers, employs six full-time people, a manager, plus some part-time help. The plant consumes 60 tons of feed per week and puts out over 1000 cases of eggs and 60 tons of manure each week.

According to farm manager Edward Bowser there wasn't much of anywhere to go for information on this type and scale of layer management, so as problems arose they had to be solved on the spot, often just by trial and error. After one and a half years' experience, Bowser felt that this kind of operation offered the firm sufficient econ-

(Continued on Page 9)

A POWERED FEED cart, operated by Tom Harter, shown being used to scrape the dropping boards under the cages This operation is done twice a week and the manure cleaned out of the pits every two weeks The 3-tiered, rows of birds are fed twice daily and the feed is leveled once a day by dragging a chain through the trough It takes about one-half hour per feeding to feed the 15,000 birds in each house. L. F. Photo



LATEST TRUCK ADDITION to the L M Sheaffer Co fleet which hauls eggs to restaurants and food markets in New York City and Philadelphia.

How to shrink your heating problems and enlarge your home

One of the big reasons electric heat is becoming so popular is the added space it gives your home. Did you know that you can get rid of your big old-fashioned furnace and the tanks, fuel lines, flues and even the chimney—and reduce all of that to a compact wall-mounted electric furnace?

In fact, with six different types of electric heating systems available, you can make your heating system disappear altogether by burying it in the ceiling. Whichever system you choose, electric heat is the safe, clean, flameless 1¢ heat.

Investigate this amazing new way to heat homes. If you're remodeling call a Reddy Kilowatt Recommended Electric Home Heating Dealer listed in the Yellow Pages under "Heating Contractors." If you're planning to build, tell your builder you want to be modern, you want the best, you want electric heat.

Electricity -- the 1¢ Heat

(Continued from Page 8)

omies to compile successful competition with outside eggs.

Bowser feels the greatest economies are gained through the volume of birds handled; the utilization of help to best advantage; and a more efficient use of feed.

He defines the greatest production problem of a large egg-line operation such as Cloisterdale as one of getting top-notch pullets. "Good pullets are the key to success in any large plant," Bowser said.

The company has a unique method for securing pullets. The hatchery and feed suppliers locate the growers and Cloisterdale Farm owns the birds and pays all growing and handling costs. Although a small reduction in costs is possible this way, the primary purpose of the program is to gain closer supervision and control over the pullet production from beginning to end. Bowser feels this practice has definitely yielded better pullets than might otherwise have been obtained.

Another factor which he feels contributes greatly to the success of the operation is the particular attention the company pays to the details of record keeping and cost accounting. A weekly report on each house goes into the office for study, and each house is analyzed as a separate enterprise.

Manure, a problem that has plagued many large cage layer operators is no problem at all at Cloisterdale; in fact, Bowser says he has a waiting list of farmers who want to haul it away. Sixty tons of manure a week could be a problem, but, between local farmers and a fertilizer plant, he manages to get rid of it readily about every two weeks.

Other interesting features of this farm are the way it handles its feed delivery and fowl problems. A straight-job truck is used two days each week for hauling bulk feed directly from the manufacturer in 9-ton loads. During the rest of the week the truck hauls eggs to the city. When the birds have completed thirteen months of lay (fourteen, 28-day periods), a poultry dealer comes in with his crew and cleans them out.

"Down time" can be another costly problem in such an operation, but at the end of each laying cycle the Cloisterdale houses stand empty for only two weeks. After the birds go out, a man comes in with a high pressure water hose and cleans and disinfects the house in one and a half days. This is followed by a thorough fumigation, and the house is ready for the next flock. Production on the farm is staggered so that birds in one house are replaced every ten weeks.

The company's plans for the future include the addition of four more houses on the farm to bring the bird total to 150,000 by next spring. At the present rate of one full-time employee per 15,000 birds, this may necessitate adding four more employees. Between the farm and the egg plant, the firm presently employes about 60 persons.

FRESH EGGS

Cloudy or milky whites in eggs indicate that the egg is fresh. Incidentally, cloudy eggs have excellent flavor.

GEHL MIX-ALL

Same Uniform Feedmaking
Plus 13 New Features

This is a good time for a Mix-All demonstration! There are 13 new features to show you.

Come on in. You'll see the new auger feeder drive that loads ingredients at *hundreds* of speeds. See the high-speed unloading transmission that empties 2 tons of feed in 5 minutes. Then, there's the new concentrate hopper at the rear, the calibrated tank, and 9 other new and useful features.

GRINDS, MIXES, DELIVERS RATIONS

ONE THING GEHL HASN'T CHANGED, though. The Mix-All still grinds and mixes with uniform precision. In the mill, 66 thin, reversible steel hammers cut (not pound) ingredients on a big 507 sq. in. grinding surface. The ration is thoroughly mixed in the 2-ton hopper.

We'd like to prove all this with a demonstration. Why not ask us?

By Mrs. Richard C. Spence, Food Editor

Food For A Festive Dinner

SPENCE

A festive roast turkey dinner sets the scene for the holiday season. The appearance of a plump, juicy bird, golden brown in color and filled with delicious old-fashioned bread stuffing is eagerly awaited. Accompaniments may be elegant or just for fun, but should carry out a holiday theme. Gay cranberry muffin gobblers are easy to make using fresh whole cranberries and seedless raisins for decoration. The children might enjoy helping you transform the muffins into turkeys.

CRANBERRY MUFFIN GOBBLERS

- 1 cup fresh cranberries
- ⅓ cup sugar
- 2 cups sifted flour
- 3 teaspoons baking powder
- ⅓ cup sugar
- ½ teaspoon ground cinnamon
- 1 egg, slightly beaten
- ¾ cup milk
- ½ stick (¼ cup) butter or margarine, melted

Wooden picks

Dark seedless raisins

Golden seedless raisins

Whole fresh cranberries

Wash 1 cup fresh cranberries thoroughly removing all stems Place in a small saucepan with ⅓ cup sugar. Cover and heat to boiling Continue heating for another 2 to 3 minutes or until berries are soft and some have popped.

Sift dry ingredients together into a bowl Combine egg, milk, and butter. Add this liquid along with the cooked ingredients Fill well-greased muffin tins about ⅔ full of batter. Bake in a hot oven (400 degrees) for 25 minutes. Turn muffins out of tins immediately and place on a rack.

To make turkey tails, string wooden picks with 4 raisins, alternating dark and light raisins. Top each with a whole fresh cranberry. Place 1 raisins-cranberry picks side by side on the top edge of each muffin To make the turkey heads, string 3 cranberries on a wooden pick. Push into muffin on opposite side of tail. Serve warm with holiday turkey. Makes 18 muffins.

* * * *

If you want something for your guests to nibble on while you're putting the finishing touches on the dinner serve them this Coconut Cheese Mold with snack crackers.

COCONUT CHEESE MOLD

- 1 (8-ounce package) cream cheese, softened
- 1 cup shredded sharp Cheddar cheese
- ½ cup Bleu cheese, crumbled
- ⅓ cup toasted flaked coconut

Assorted snack crackers

Combine three cheese and blend Pack into a small greased bowl. Chill for 3 to 4 hours Unmold onto a plate Sprinkle top and sides with coconut Chill until ready to serve Serve with assorted crackers Makes about 2 cups cheese spread.

An irresistible dish for a holiday menu is spoon bread Each bite is a luscious blend of rich sweet milk, cornmeal and eggs, plus a special addition, cottage cheese. Serve plenty of melted butter with it. Spoon bread is very similar to a souffle in texture and must be enjoyed the minute it comes from the oven.

COTTAGE SPOON BREAD

- 1¾ cups milk
- ½ cup cornmeal
- 1 tablespoon sugar
- 1 teaspoon salt
- 3 egg yolks
- 3 tablespoons butter
- 1 cup cottage cheese
- 3 egg whites

In a 2-quart saucepan scald milk Add cornmeal and cook, stirring constantly until thickened Mix in sugar and salt Blend in small amount of hot cornmeal mixture with egg yolks, then return to saucepan, mixing thoroughly. Stir in butter and cottage cheese. Beat egg whites until stiff but not dry; then, slowly fold cornmeal mixture into them. Pour into a buttered 1½ quart casserole and bake in ½ hour. Makes 8 servings.

a preheated 375 degree oven for 35 minutes. Serve immediately with plenty of melted butter. Makes 6 servings.

* * * *

This creamy rice pudding is the perfect dessert to serve with your Thanksgiving dinner

SWEDISH RICE PUDDING

- 2½ cups milk
- 1 cup converted long grain white rice
- ½ teaspoon salt
- 3 tablespoons sugar
- 1 teaspoon vanilla extract
- 1 cup heavy cream, whipped

Heat milk until bubbles appear around the edges of saucepan. Add rice and salt. Cover tightly and cook over low heat until milk is absorbed, about 25 minutes. Stir rice occasionally with a fork. Remove from heat. Add sugar and vanilla. Cool to room temperature. Gently fold in cream. Chill at least ½ hour. Makes 8 servings.

Savings Bonds Are Safe and Sure

One way to make a safe investment is to buy United States Savings Bonds Such bonds are safe and sure, protected against loss, and have a guaranteed rate of interest to maturity

There are some real tax advantages when you invest your money in Series E Savings Bonds You can defer payment of income tax on the interest until maturity Also, Savings Bonds are exempt from state and local income taxes

With United States Savings Bonds, you get four dollars at maturity for every three dollars you invest and even more if you hold the bonds for a longer time

You can buy and hold savings bonds for your future Begin now through the payroll savings plan where you work or regularly where you bank

Some Figure-Saving Food Hints for the Holidays

Enjoy any party food that is s[illegible] of but limit the size of your selection You might [illegible] an open-faced sand[illegible]e with thin slices [illegible] tead of a small [illegible] rich crem[illegible]

[illegible] nibble fresh [illegible] such as cal[illegible] ry sticks

[illegible]y candies and cakes [illegible]e high in calories [illegible]n't resist a second [illegible] tasting the first, [illegible]st one

Take care to control the size of portions and the rate of eating Small servings of everything don't leave you with the feeling of being on a special diet The slower you eat, the less you'll eat.

Calorie carriers to watch are the extra holiday frills such as gravy sauces and the combination of high-calorie vegetables, stuffings and desserts

If you have enjoyed a high-calorie between-meal food, say 'no thank you' to a dessert

Did you know that your body needs fuel for energy, and protein, vitamins, and minerals to do its best work? A breakfast of fruit or juice, an egg, toast or bread and milk supplies these essentials. Persons who do hard physical work may need to include cereal or meat to prevent that midmorning slump that cuts down on production.

In 1860 only four states in the Union were without newspapers They were Idaho, Montana, Wyoming and North Dakota

(Continued from Page 1)

plicant because he had ready access to information on the applicant's character and background.

Carl Brown from the Lancaster Production Credit & Federal Land Bank Association was the second speaker. He said loans may range in nature of maturity from one day to 35 years. This depends upon the use to be made of the loan and the capacity of the borrower to repay. For example, an operating loan to purchase something that will be used up in one year or less — fertilizer, feed, etc.—should be paid when the crop goes. A farmer should know his capacity for repayment. Brown said. If an operation hasn't a reasonable chance of success his banker will seldom go along.

Raymond Taylor 1st Pennsylvania Bank & Trust said his bank is the oldest in the U. S. (est. 1774) and that it the 19th largest in total assets. Their type of banking is described as a discounting operation. Taylor said. They got into agricultural financing through farm equipment dealers. That transaction is between the farmers and the dealer, then 1st Pennsylvania will discount the dealers loan. He said he has found the farmer to be an excellent credit risk — outstanding character, honest, and steady.

"One fallacy in the credit business today," Taylor said, "is that people don't budget their needs, and consequently live beyond their incomes." It is necessary to plan for future expenditures step by step, he told the farmers. Any financial institution is interested in seeing a borrower take this approach. "But most important," Taylor cautioned, "level with your banker; put all your cards on the table, and your chances of getting what you want will be greatly improved."

Paul Whipple of Miller & Bushong told the group that his job was to help individual farmers get set up with the proper kind of financing. This involves analyzing the particular needs of a farm, the amount of family labor available, etc. If a farm has several enterprises, it may be that one or more should be eliminated or expanded. Only a thorough analysis can disclose this in detail, Whipple said. He described the approach he takes to help farmers boost their income through better financial management of their business. Basic need is often for farm enlargement, he said.

Following the discussion an informal question and answer period took place with many of the members participating.

MEMBERS OF A PANEL DISCUSSION on farm credit at a Young Farmers' meeting at Garden Spot High School this week are shown above. Left to right they are: Raymond Baxter, The Blue Ball National Bank; Carl Brown, Lancaster Production Credit & Federal Land Bank Assn.; Raymond Taylor, First Pennsylvania Banking & Trust Co.; and Paul Whipple, Miller & Bushong, Inc. WHAT'S NEW IN THE LONG GREEN LINE

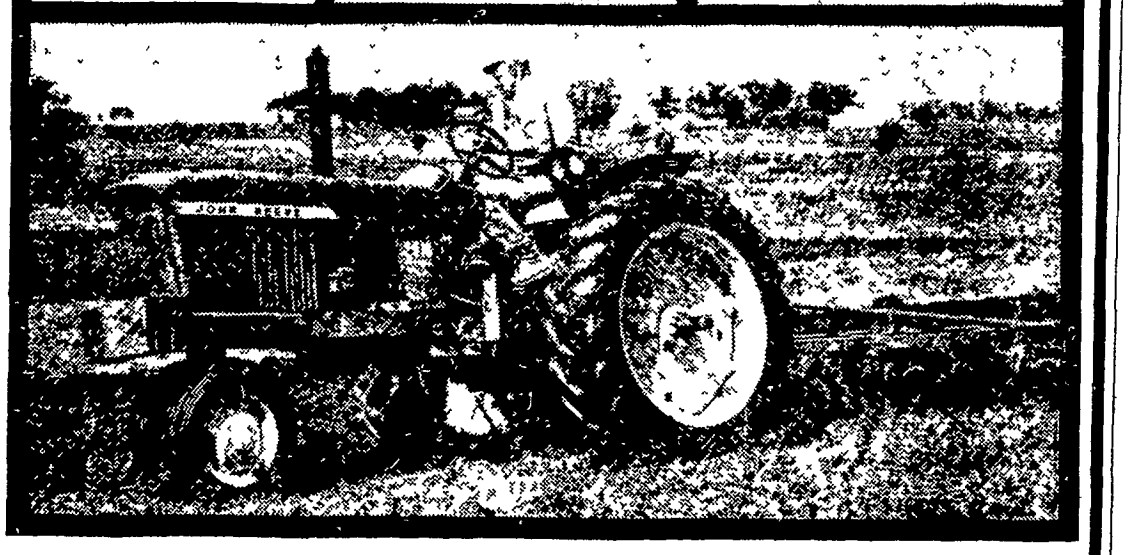
NEW 2510 53 H.P.

POWER SHIFT

GAS and DIESEL



Only two other Tractors can match its features... the John Deere 3020 and 4020

You see, the features of the new "2510" were adopted from the bigger "3020's" and "4020's"—and tractors don't come any more dependable than that. The new "2510" has such field-proved features as: Power Shift or Syncro-Range Transmission . . . exclusive closed-center hydraulic system . . . and independent dual-speed 540-1,000 rear PTO and 1,000 rpm front PTO. From its deluxe armchair seat to its Roll-O-Matic front end, all the features of the new "2510" have been farmer-tested-and-approved on the bigger John Deere Tractors. Test-drive one for yourself soon.

Crop Roundup

(Continued from Page 5)

The crop possesses a nice chestnut brown color and is of very high quality. Some shed burn has occurred but damage is relatively light. A few growers began stripping the crop the last week of October.

CARRYOVER OF PA. SEEDLEAF DOWN

Carryover of Pennsylvania cigar filler tobacco owned by dealers and manufacturers on October 1 was estimated to be 131.0 million pounds, down about 7 million pounds from a year ago. The decrease in uncured stocks more than offsets a small increase in estimated 1965 production. Disappearance of the 1964 & earlier crops will probably reach 53 million — about 8 million larger than the unusually low 1964 figure. However, the total supply for the 1965-66 marketing year will be about 178 2 million pounds. This is 5.8 million less than was available a year ago but about average for the past several years. Based on the current disappearance rate, a 3½-year supply now exists.

PA. EGG PRODUCTION DOWN TO 242 MILLION

Egg production during October reached the lowest point for any October since 1950. A total of 242,000,000 eggs were produced last month compared with 260,000,000 in October 1964, a decrease of 7 percent. A declining number of layers is primarily responsible for the drop in egg production from last year.

There were 13,802,000 layers on Pennsylvania poultry farms during October, slightly below September 1965 and 7 percent below October 1964. Number of layers declined from September to October for the first time since records were kept. Normally number of layers increases as pullets are added to flocks. In recent years the increase from September to October has been decreasing but this is the first year for a reversal of this historic seasonal trend. The small chick hatch earlier this year probably helped keep the expansion of flocks at a minimum this fall.

The number of eggs produced per layer averaged 17.-55 during October, 1 percent more than a year ago Rate of lay the first of November was 55 5 percent the same as a year ago but 4 percent less than October 1.

Prices received by poultrymen for all eggs during October averaged 39.0 cents per dozen, the same price received in September 1965 and October 1964. Poultry feed prices have increased slightly from last year causing the egg-feed price ratios to decline, indicating a less favorable economic position for the farmer.

MILK PRODUCTION UP 11 MILLION LBS. OVER '64

Milk cows in Pennsylvania during October produced 548 million pounds of milk, up 6 million pounds from September and 11 million pounds above October 1964. October milk production this year was 5 million pounds above the 1959-63 average but 16 million pounds less than the record high in October 1962.

Based on the July 1, 1962 Pennsylvania population estimate, October milk production was at a level to provide 1 55 pounds or .72 quarts daily per person in the State.

The number of milk cows on Pennsylvania farms in October was 783,000 or 2,000 less than September. Milk cow numbers are down approximately 4 percent from October 1964 and 10 percent below the October 1959-63 average Lack of roughage has caused some dairymen in the drought areas of the State to dispose of their milking herds However, due to a more favorable late summer and early fall than in the past few years sales do not seem to be as prevalent.

The October milk output per cow was 700 pounds or 40 pounds above October 1964 and 76 pounds above the October average On a daily basis, October output at 22.58 pounds was about 4 pounds under September but about 1 3 pounds above October last year.

The daily rate of feeding grain and concentrates was 11 4 pounds per cow during October or 3 percent more than September and 6 percent above the October 1964 rate The amount of grain fed per 100 pounds of milk produced was 41 0 pounds, one pound below last year.

Penn Manor

(Continued from Page 1)

tion with the Pennsylvania Grassland Council, Nissley served as moderator and a resource person.

Garber described his farming program to the group. He operates a dairy with free-stall housing and a milking parlor, and farms corn and some alfalfa. Garber said he uses the Penn State Forage Testing Program and finds it very helpful in planning feeding programs.

Sterling Elmer also described his farming program. His farm is essentially dairy, but unlike Garber, he uses an all alfalfa and pasture forage program. His cows are housed in stanchions and the milk is handled by pipeline.

Slides were shown of the farms of each of the panel members, and of the forage testing laboratory at Doylestown.

Richard Hackenberger, teacher of agriculture at Penn Manor High School, briefly described the Penn State forage testing service, showing how samples are analyzed and feeding programs developed.

Nearly 200 million road maps were issued to motorists in the U. S. last year.

Nutritionist Gives Area Dairymen Some Livestock Feeding Advice

by Everett Newswanger, staff reporter

An expert on dairy cattle feeding told a group of Lancaster County Dairy farmers this week, "Since corn is a natural silage crop and is easily preserved, the routine use of a chemical preservative is not recommended for corn silage."

Dr. Richard Adams, Extension Nutritionist, Pennsylvania State University, speaking to a disappointingly small number of dairymen gathered at the Solanco High School, Quarryville, Wednesday evening, for the Dairy Clinic sponsored by the Lancaster County Extension Service, said, "The exceptions to this are ground limestone for livestock other than dairy cattle and possibly sodium metabisulfite when problems with silo gas may be expected.

"The use of urea as an additive for silage is not being encouraged," Dr Adams stated

VITAMINS

Adams suggests that sufficient vitamin concentrates be included in the ration to provide 30,000 units of supplemental vitamin A and 60,000 units of supplemental vitamin D per head daily Supplementation with fat-soluble vitamins should be considered especially in herds fed limited forage rations (around 1.5 pounds of hay - equivalent per 100 lbs. of body weight), those using year-round stored feeding, and those feeding little or no hay with corn or other annual silages.

MINERALS

For insurance purposes, supplementary minerals should be provided to all dairy cattle both in the grain mixture and on a free-choice basis. "A phosphorus deficiency or calcium-phosphorus imbalance is the most commonly found mineral problem," he said.

All animals need a source of salt. Adams suggested the use of a trace mineral salt unless appreciable amounts of a commercial protein concentrate or a commercial mineral mixture containing trace minerals is used.

UREA

"Both research and farm experience have demonstrated that satisfactory results can be obtained when urea is properly used as a protein substitute for dairy cattle," Adams said. He gave six recommendations for its use: 1) Use at least two to four weeks to gradually convert cows from a non-urea to a urea-containing ration; 2) Limit urea to 1.0%-2.0% of the grain mixture as fed to dairy cows for palatability reasons; 3) Do not use urea in mixtures containing raw soybeans or inadequately heat-treated soybean products; 4) Make certain that urea-containing mixtures as fed are adequately balanced; 5) Use good mixing methods to insure against intake of toxic levels; and 6) Consider removing urea from the ration of sick cows with impaired rumen function, particularly if nitrate poisoning may be involved.

A similar clinic under the direction of Dr. Adams was held for dairymen in the northern part of the county Thursday evening at the Manheim Twp. Jr. High School, Neffsville.

1 year ago Hornco introduced cycle laying feeds — Today . . .

More Poultrymen Are Using Hornco Cycle Laying Feeds Then Ever Before

The results have been tremendous — constantly our customers are reporting to us the excellent results of their flocks being fed on the Hornco Cycle Laying Feed Program. Their results show:

1. Better feed conversions
2. Lower feed costs per doz.
3. Higher peak production
4. Larger egg size
5. Ideal body weight and condition

Hornco Cycle Laying Feeds — "Different Feeds For Different Periods of the Laying Cycle."

Hornco Feeds — First with new feeds and services to serve business farmers.

HORNCO FEEDS

Why not ask your neighbor about his results with Hornco Feeds?
